

# Actian Vector QuickStart

The Actian Vector Implementation QuickStart Package offers a pre-defined set of professional services, tailored to your requirements, that is designed to help you realize product value quickly and efficiently from the time of purchase.

## QuickStart Benefits

### Quick Win

Actian Vector fully installed and configured for your workload

### Guided Adoption Plan

Full conversion/migration plan

### Knowledge Transfer

Transparently leverage best practices and planning

## QuickStart Goals

Actian's Professional Services team has designed the Implementation QuickStart Package as a two week engagement that enables new customers to:

- Easily install and configure Actian Vector
- Ensure our mutual success by developing a plan to port or develop your application(s) to leverage Vector's high performance
- Provide preliminary training and knowledge transfer so that your team can quickly become self-sufficient

## Deliverables

### Kickoff

- Review and confirm a joint agenda for the engagement
- Review hardware and Operating System configuration and installation preparations
- Review operational and database requirements and target application(s)

### Installation & Configuration

- Installation and configuration planning
- Review and confirm hardware and Operating System installation
- Install Actian Vector
- Configure Vector for your workload
- Test and confirm installation

### Integration Points

- Review ETL subsystem to define optimal approach to load and update Vector
- Review application/BI subsystem and advise on front-end application integration and tuning (if needed) to optimize overall performance
- Review any other database integration points and advise on integration approach

### Preliminary Training

- Provide preliminary training to get started with using Actian Vector
- Review basic administrative and operational processes
- Review developer concepts for making the most of Actian Vector

### Implementation Assistance

- Assist your team with starting the implementation tasks outlined from the previous steps

## Database Design

- Review, adapt and deploy schema for the target application or subject area
- Adjust schema based on actual data loaded if needed, based on output from Actian's schema analysis tools

## Load & Query

- Load a full set of your data for testing
- Execute a subset of queries against Vector to test and confirm proper query execution
- Identify any SQL syntax refinements that may be needed for functionality and/or performance

## Optional Next Steps

Based on the knowledge gleaned from the engagement, we can also assist you with your overall plan to achieve full conversion or migration of your application to Actian Vector.

This includes providing full feedback so that you can appropriately plan:

- SQL conversion if needed
- ETL subsystem development and/or integration
- BI subsystem integration
- Functional and performance testing
- Go-to-Production approach
- Additional Training needs
- Approach for monitoring and managing your system once in production
