

Action VectorH QuickStart

The Action VectorH Implementation QuickStart Package is a pre-defined set of professional services, tailored to your requirements, that is designed to help you realize product value quickly and efficiently from the time of purchase.

QuickStart Benefits

Quick Win

Action VectorH fully installed and configured for your workload

Guided Adoption Plan

Full conversion/migration plan

Knowledge Transfer

Transparently leverage best practices and planning

QuickStart Goals

Action's Professional Services team has designed the Implementation QuickStart Package as a three week engagement that enables new customers to:

- Easily install and configure Action VectorH
- Ensure our mutual success by developing a plan to port or develop your application(s) to leverage VectorH's high performance
- Provide preliminary training and knowledge transfer so that your team can quickly become self-sufficient

Deliverables

Kickoff

- Review and confirm a joint agenda for the engagement
- Review hardware and Operating System configuration and installation preparations
- Review operational and database requirements and target application(s)

Installation & Configuration

- Installation and configuration planning
- Review and confirm hardware and Operating System installation
- Install Action VectorH
- Configure VectorH for your workload
- Test and confirm installation

Integration Points

- Review ETL subsystem to define optimal approach to load and update Vector
- Review application/BI subsystem and advise on front-end application integration and tuning (if needed) to optimize overall performance
- Review any other database integration points and advise on integration approach

Preliminary Training

- Provide preliminary training to get started with using Action VectorH
- Review basic administrative and operational processes
- Review developer concepts for making the most of Action VectorH

Implementation Assistance

- Assist your team with starting the implementation tasks outlined from the previous steps

Database Design

- Review, adapt and deploy schema for the target application or subject area
- Adjust schema based on actual data loaded if needed, based on output from Actian's schema analysis tools
- Optimize data partitioning based on cluster sizing and workload

Load & Query

- Load a full set of your data for testing
- Execute a subset of queries against VectorH to test and confirm proper query execution
- Identify any SQL syntax refinements that may be needed for functionality and/or performance

Optional Next Steps

Based on the knowledge gleaned from the engagement, we can also assist you with your overall plan to achieve full conversion or migration of your application to Actian VectorH.

This includes providing full feedback so that you can appropriately plan:

- SQL conversion if needed
- ETL subsystem development and/or integration
- BI subsystem integration
- Functional and performance testing
- Go-to-Production approach
- Additional Training needs
- Approach for monitoring and managing your system once in production
