

Actian DataConnect

Empowers anyone to integrate

DataConnect is the intelligent, low-code integration platform that allows you to address your most complex use cases with automated, intuitive, and reusable integrations, Deliver high-quality data pipelines at the speed of business.

DESIGN: Use a visual, point-and-click design interface to connect, cleanse and map data sources to targets and build process workflows based on business rules.

DEPLOY: From the IDE or web-based interface, save integrations as reusable templates and easily deploy them to any environment.

CONFIGURE: Allow end-users to configure settings like usernames and passwords, schedules, or real-time event listeners.

The Actian DataConnect integration platform combines robust data integration, transformation, and mapping with automated quality checks providing trustworthy data to anyone in the organization.

With its emphasis on reuse and adaptability, DataConnect is built to help you cost-effectively integrate diverse data and applications from any source and deploy across cloud and on-prem environments.

BENEFITS & VALUE

Empower anyone to integrate: Create workflows and configuration options that enable users to leverage self-serve integrations, enforce data quality standards and tap into reliable and governed data. Easily access your integrations using a robust IDE or through DataConnect's intuitive web-used UI.

Ensure Data Quality: Data profiles and quality rules ensure data is complete, accurate, and meets company standards and compliance requirements.

Make data-driven decisions with ease: Make reliable business decisions using data you trust. DataConnect offers powerful data profiling capabilities that allow you to visualize data quality and drill down into data problems so you can take action before poor quality impact your systems.

Integrate Anytime: Orchestrate, schedule, and manage data pipelines to provide your users with timely and accurate data when they need it. Connect your data with batch, real-time event, and embedded processing options.

CAPABILITIES

- Integrate, orchestrate and automate data pipelines
- Connect to any data source and destination
- Data profiling, data quality and transformation rules engine
- Automated workflows and data pipelines
- Hybrid support: Use your cloud, the Actian Cloud or connect to on-premises databases and applications without moving data to the cloud
