

DataConnect Integration Platform

Empowers Anyone to Integrate

The DataConnect integration platform is the intelligent, low-code integration solution that allows you to address your most complex use cases with automated, intuitive and reusable integrations. Deliver high-quality data pipelines at the speed of business.

DESIGN: Use a visual, point-and-click design interface to connect, cleanse and map data sources to targets and build process workflows based on defined business rules.

DEPLOY: From the integrated development environment (IDE) or web-based interface, save integrations as reusable templates and easily deploy them to any environment.

CONFIGURE: Allow end-users to configure settings like usernames and passwords, schedules, or real-time event listeners.

The DataConnect integration platform combines robust data integration and intuitive mapping with automated quality checks, providing trustworthy data to anyone in the organization.

With its emphasis on reuse and efficiency, the DataConnect platform is built to help you cost-effectively integrate diverse data and applications from any source and deploy across cloud and on-premises environments.

BENEFITS & VALUE

Empower anyone to integrate: Create workflows and configuration options that enable users to leverage self-serve integrations while enforcing data quality standards providing reliable, consistent, data. Easily access your integrations using a robust IDE or through the DataConnect platform's intuitive web-based UI.

Ensure data quality: Data profiles and quality rules ensure data is complete, accurate, consistent and meets company standards and compliance requirements.

Make data-driven decisions with ease: Make reliable business decisions using data you trust. The DataConnect platform offers timely, quality data to enable organizations to make decisions based on data they can trust.

Integrate anytime: Orchestrate, schedule and manage data pipelines to provide your users with accurate and complete data when they need it. Connect your data with batch, real-time event and embedded processing options.

CAPABILITIES

- Integrate, orchestrate and automate data pipelines
- Connect and map data from any source to any target
- Data profiling, data quality and mapping rules ensure data is trustworthy and compliant
- Automated workflows and data pipelines improve resuability and efficiency and to reduce dependance on IT resources
- Hybrid support: Support for data on premises, in the cloud, in your VPC, or across multi-cloud environments
