HCL Informix/OneDB DBA Services

Key Benefits of Database Services

- Database Administration
- Database Management
- Archive and Restore
- Capacity Management
- Upgrades and Tuning
- Ad hoc Support

Overview

DBA services is a service offering for performing day-to-day DBA tasks at the client location/remotely. This service provides part-time or full-time DBAs based on client requirements and is customizable to match business needs.

Why DBA Services?

A dedicated DBA is responsible for directing and performing all activities related to maintaining a successful database environment. A DBA makes sure that an organization's databases and related applications operate functionally and efficiently. The DBA is responsible for understanding and managing the overall database environment. By developing and implementing a strategic blueprint to follow when deploying databases within an organization, DBAs are instrumental in the on-going efficacy of applications that rely on databases for data storage and access.

Sometimes it is hard to find specialized HCL Informix/OneDB DBA skills at a client location. At other times, the client wants to reduce the cost of DBA functions by moving it offshore or making it a part-time position or simply wants to augment DBA staff only during a peak season.

Importance of DBA Services

The most important aspects of database administration include:

- Database Availability
- Database Backup and Restore
- Database Design
- Data Movement / Data Purging
- Frequently Required Maintenance Tasks
- Database Upgrade/Patching
- SQL Query Tuning
- Database Tuning
- Database Security
- Capacity Planning
- Database Monitoring.

Offshore/On-Site Deployment

DBA services is available off-shore or onsite depending on a client's requirements, policies, time zone, and budget. The service can also be a combination of onsite and offshore/remote or offshore (remote) with periodic onsite visits. Services are flexible to satisfy clients' needs, including costs and coverage.
