

# DataExchange for Zen

Ensure business continuity with secure, real-time data replication

## Reliably Move Data Between Databases

DataExchange for Zen offers two types of data replication solutions: real-time data backup of a single Zen or Pervasive SQL (PSQL) database and data synchronization between multiple applications. DataExchange provides a simple to use solution for securing and protecting your mission-critical data from application downtime and data loss.

## Keep Business Data Secure and Organized

DataExchange meets your most important data replication needs. DataExchange Real-Time Backup Edition can help reduce disaster-related downtime with a remote backup of key application data. DataExchange Data Synchronization Edition can help keep a consistent set of data across multiple applications.

## Real-Time Backup Increases Application Availability

Quick recovery is essential to minimize business losses during an application outage. DataExchange Real-Time Backup captures change events in the Zen or PSQL database and replicates them to a secure remote always-available duplicate backup. DataExchange reduces the loss of data and downtime associated with:

- Hardware Failure – computer or disk crashes
- Site Disaster – floods, fires or power outages
- User and Application Errors – accidental deletions, OS or application errors

DataExchange Real-Time Backup Edition helps reduce the recovery time in the event of a loss – no matter what the cause.

## DataExchange Real-Time Backup Edition

### Key Benefits

- Secure your data anywhere, with real-time backups and encryption
- Minimize disruption with fast data replication and retrieval.
- Gain a centralized view of your business data, simplifying management
- Keep your applications running with improved uptime and faster recovery

### Supported OS Platforms

- Windows 10, 8, 7
- Windows Server 2019, 2016
- Windows Server 2012, 2008 R2
- Windows Small Business Server 2011, 2008
- Windows Foundation Server 2008 R2

## DataExchange supports multiple replication networks

### DataExchange Technology

DataExchange captures and shares changes from one Zen or PSQL database to another by adding two software components to the database: Replication Event Handler and Replication Engine.

- Replication Event Handler plugs into the Zen or PSQL database engine and logs inserts, updates and deletes.
- Replication Engine reads the tables created by the Event Handler and identifies records changed since the last replication session.
- Changes are grouped into packets and shared with other replication engines participating in a DataExchange network.
- Detecting and Resolving Conflicts – DataExchange has default and user-definable conflict resolution rules.
- Encrypting Communication – All communication between Zen and PSQL servers is encrypted with a 128-bit key.

### About Actian

Actian makes data easy. We deliver cloud, hybrid cloud, and on-premises data solutions that simplify how people connect, manage, and analyze data. We transform business by enabling customers to make confident, data-driven decisions that accelerate their organization's growth. Our data platform integrates seamlessly, performs reliably, and delivers at industry-leading speeds. Learn more about Actian, a division of HCLSoftware: [www.actian.com](http://www.actian.com).
