

Power Every AI Agent and User with Trusted Data

Deliver governed, contextual, production-ready data that prevents 'bad AI.'

When AI agents are fed bad, incomplete, or disconnected data, you can't trust the outcomes. To avoid those "when bad AI happens" moments, you need production-ready data that's accurate, contextual, and governed from the start. Every AI agent and workflow then has the right data, context, and guardrails needed to deliver quality results.

Gartner predicts that through 2026, organizations will **abandon 60% of AI projects** unsupported by AI-ready data.
 —Gartner "Lack of AI-Ready Data Puts AI Projects at Risk," February 2025.

Deliver Production-Ready Data with Speed and Confidence

The Actian Data Intelligence Platform delivers the context, governance, and data reliability AI needs to perform dependably. The platform ensures every dataset is traceable and trustworthy before AI agents access it.

With Actian, you benefit from:

- **Accurate AI reasoning** powered by a federated knowledge graph that gives AI agents shared business definitions, relationships, and context.
- **Real-time, validated inputs** via Model Context Protocol (MCP) Server that feeds AI agents the exact data they need, in the format they expect.
- **Source-aware data** with lineage that shows where data comes from and how it changes, so AI avoids guesswork and delivers dependable outputs.
- **Reliable model inputs** through data quality and observability that monitor pipelines, detect anomalies, and fix issues before they become bad AI moments.

- **Governance by design** embedding policies, lineage, and access controls into workflows to give domains control without slowing innovation.
- **Faster, safer AI outcomes** using data products backed by data contracts that guarantee delivery, governance, and integrity.

Optimizing a Data Catalog

SNCF Connect & Tech is a French e-commerce company.

- **Challenge.** SNCF Connect's data was scattered across Excel files and Wiki pages, limiting accessibility and slowing innovation.
- **Solution.** The Actian Data Intelligence Platform democratizes data access while enabling agility, cloud compatibility, and governance.
- **Outcome.** SNCF Connect now has a unified, governed data foundation that strengthens its understanding of data and paves the way for AI-powered efficiency.

Take the Next Step

Don't wait for bad AI moments to undermine trust. Actian delivers production-ready, governed, and contextual data to every AI agent, helping you innovate faster and giving you confidence in AI decisions.

About Actian

Actian empowers enterprises to confidently manage and govern data at scale with flexible solutions that work across on-premises, cloud, and hybrid environments. The data and AI division of HCLSoftware, Actian delivers data management and intelligence solutions that accelerate AI-ready data delivery. Learn more at actian.com.
